**RE: Well Water Sampling Event –
Laboratory Test Results**

Dear Names of Recipient:

On behalf of Wood River Pipe Lines LLC (Wood River), Antea™Group would like to thank for your cooperation in allowing Antea Group to collect a water sample from the water supply well at your residence. The water sample was collected in response to the pipeline spill site near Route 113, Kankakee, Illinois in order to confirm that petroleum products have not impacted your well water. A sample was collected from the well located on your property on March X, 2014.

Enclosed for your information are the test results from your well water. We are pleased to report favorable test results that meet both the United States Environmental Protection Agency (USEPA) and Illinois Environmental Protection Agency (IEPA) standards for drinking water. The presence of **styrene** and **chloromethane** in your well is not associated with petroleum products. In addition, **styrene's** concentration is well below the USEPA and IEPA drinking water standards. The USEPA and IEPA do not have a drinking water standard for chloromethane.

If you desire further explanation of these results, or if you have additional questions regarding the water testing procedures, please contact me at (800) 477-7411 or Katherine Zeth of Wood River at (610) 904-4494.

Sincerely,

Gary Schroeder
